

Figure 1 is a line graph showing the temperature dependence of the relative rate of growth (RGR) for various life history traits of *Drosophila melanogaster*. The x-axis represents Temperature (°C) from 16 to 30. The y-axis represents RGR from 0.0 to 1.0. A vertical dashed blue line is at 20°C and a vertical dashed red line is at 28°C. The traits are represented by different colored lines: purple (highest RGR), green, pink, red, brown, teal, grey, blue, and orange (lowest RGR). Most traits show a peak in RGR between 20°C and 28°C.
